

SalesBot: a salesperson that finds clients every day

A simple explanation of FluxBase BotSeller: what it is, what it does and why a company no longer has to manually hunt for contacts online.

FluxBase BotSeller

What is SalesBot?

SalesBot is a web-based sales assistant. It works like an employee who checks which companies are worth contacting, finds email addresses, prepares messages and sends them in a controlled way.

Plain explanation

In plain words: you tell the bot, 'find these types of companies and offer them my service'. The bot handles the rest: search, filter, write, send and report results.

Honest note

It is not a magic money machine. It is a system that performs boring, repetitive sales work every day more consistently than a person juggling 30 browser tabs.

What exactly does it do instead of a person?

Finds companies
by industry, location, country, region or custom city list.

Checks fit
rejects companies without email, duplicates and off-target contacts.

Writes the first email
based on your offer, brand tone, sample email and CTA.

Sends gradually
through the configured SMTP mailbox, following the campaign limit.

Handles follow-ups
it can send reminders, but only with the configured spacing.

How does it work step by step?

1	You set the direction You describe the target companies, your offer, email style and things the bot should avoid.
2	The bot finds companies It checks selected industries and locations daily, such as Poland, regions or European countries.
3	It removes junk It skips companies without email, off-target leads, duplicates and blacklisted contacts.
4	It writes the message It creates an email based on your offer and uses the right language for the market: Polish or English.
5	It sends gradually It does not blast a mailbox. It spreads sending over time, following limits and warm-up rules.
6	It shows results The panel shows leads, sent messages, replies, follow-ups and usage limits.

One-sentence example

A company sells websites for dental clinics. SalesBot finds clinics, rejects bad matches, finds email addresses, writes a short offer message and sends it gradually during the day.

What does the client and admin see?

Client panel

The client does not need technical knowledge. They log in and see leads, sent emails, replies, statuses, follow-ups and remaining limits.

Admin panel

FluxBase manages clients, campaigns, bots, SMTP, sending queue, tests, Stripe orders and AI usage from one place.

Key system views

Campaigns

where the target, offer, tone, CTA, limits and follow-up rules are defined.

Leads

companies the bot marked as worth contacting and where it found an email address.

Messages

sent emails, statuses, replies and scheduled reminders.

Sending queue

the technical place where messages wait for the correct sending time.

Orders

after Stripe payment, the client can be activated and given panel access.

Safety and control

Mailbox warm-up

The bot starts carefully and increases volume according to configured limits, so the mailbox does not look like a spam cannon.

Work-hour sending

Emails are sent inside the campaign window, not randomly at every hour of the day and night.

Blacklists and opt-outs

Addresses that reply STOP, unsubscribe or bounce are blocked from future sending.

Target control

The bot treats the campaign description as the source of truth. The offer does not become the target, so the system avoids random companies.

Why does it matter?

In cold email, the worst idea is to send too many messages at once to random companies. BotSeller is designed to behave like a patient salesperson: small steps, correct target, controlled sending, clear results.

Plans and limits

Prices are net. Plans mainly differ by sending pace: daily and monthly email volume.

Trial	20 emails/day / 100 total	Short system test	250 PLN / 5 days
Starter	20/day / approx. 600 monthly	Small company or first target	999 PLN / month
Growth	40/day / approx. 1200 monthly	Regular lead generation	1999 PLN / month
Pro	80/day / approx. 2400 monthly	Bigger campaigns and more scale	3999 PLN / month
Extra mailbox	+40 emails/day	When you want more capacity	1500 PLN / month

Simple plan choice

Trial is for testing whether the target and messages make sense. Starter is a calm start. Growth is the best fit for regular work. Pro makes sense when the campaign needs more scale or stronger targeting.

Who is it for?

B2B companies

When you sell a service or product to other companies and need regular first contact.

Agencies and software houses

When you want to reach companies that may need websites, stores, automation or marketing.

Local businesses

When you want to search in a city, region, Poland or selected European markets.

Production, logistics, services

When the target can be described clearly: who they are, what they do and what they may need.

What is needed to start?

Choose a plan and pay through Stripe.

Fill in the campaign form: target, offer, email style, CTA and things to avoid.

FluxBase checks the setup, domain, SMTP and limits.

The bot starts: one lead, one message, then the next cycle.

One sales sentence

FluxBase BotSeller is your future salesperson that does not take vacations, does not need coffee breaks and handles the most repetitive part of sales every day: finding companies and writing first.
